This game is not meant to poke fun at the people suffering from the COVID-19 virus; it's meant to put a ''face'' on this virus

and explode the shit out of it because that's exactly what it deserves. This project was inspired by one of the many stupid situations that resulted in the initial lockdown back in March. Most notably, the toilet paper hoarding (which already feels like ages ago). It's dumb, it's over the top and it's FUN. I may or may not keep adding new game mechanics as I'll eventually go back to set for film work. There's also an ANDROID VERSION that's very similar to the PC version and is also FREE. It's called OPERATION VIRUS. My offer to send $10 to the first person that can reach 10 000XP still stands. Print screen proof and email at dan @ supernice.ca -- Ever wanted to throw ridiculous amounts of toilet paper at giant viruses invading your home? Well here's your chance. Operation COVID-19 is an endless first person shooter in which you can give those viruses what they deserve: blow them all up! FAST PACED We made the game and even we can't keep up. You constantly have to be on the move in order to survive. Don't let your enemy surround you! Here are your survival strategies: INFINITE TP Using some quantum dynamics voodoo magic sh#t, the TP-Gun 1000™ can generate an unlimited amount of TP projectiles. Watch that overheat bar though! =left width=240>Right click and choose annotate_points. Image and Padding At the right edge of the image, under the right padding you will see the margin and padding properties. The margin property sets the right and left edges of the image's margin. The padding property determines the amount of space between the image and the edge. If you set the margin to 5 pixels or 20 pixels from the right edge of the image, but leave the padding to 0, the distance between the image and the edge increases to 20 pixels or 5 pixels respectively. Text Position WordWrap displays text automatically as needed, but you can control how much text is displayed at once, and that is done through the text property. Try setting the text to "A little", "Some more", or "Lets stop". Setting the text to "A little" will only display that text (not what in-between). "Some more" will display all the text and display a vertical line to separate the lines. "Lets stop" sets the text to a single line that will wrap to multiple lines. Image Height This image is designed for a 400px width. If you set the width to 600px you will only have 600 pixels of height for the image. If you are content with this, but can change the image to 900px height but width unchanged, set the height property to 900. Image Width The image is designed for a 400px width. If you set the width to 600px you will only have 600 pixels of height for the image. If you are content with this, but can change the image to 900px height and width unchanged, set the width property to 900. If the heights and widths are identical the only way to make the image look better is to play with the padding. Image Type WordWrap can crop images (only the left half is displayed) to maximize the amount of text space. It displays an image on the left, creates a new line, then displays an image on the right and resizes the image to its new size on the right. In some cases this can mean the images are stretched vertically out of the page, but using image_mode='from_left' will center images, filling available space. You're Andrew, a former class 3 Galactic Citizen. As you start your new life in the Outer Rim Territories, you're suddenly trapped in one of the many victims of a deadly plague, which is beginning to break out in the station, leaving the population in a state of panic. "It is with great sadness that I type this review for the first time. On Wednesday, before I turned 18, I got to see my first full trailer for the latest installment in the Assassin's Creed franchise, Assassin's Creed: Unity. I was going into this with an open mind, I know most critics had said they were impressed with the gameplay and their hands on time, but you just can't get in a mindset to enjoy an Assassin's Creed game without being extremely nervous for it. The trailers and early reviews of Unity have been negative, and many reasons have been made for people to be skeptic of the game. For one, it is hard to make a new Assassin's Creed game from scratch. It's quite hard to implement a new storyline, as well as how the gameplay is going to be. In addition, the game's use of real-life locations and props was a huge factor of the realism, but it did seem to frustrate some people with the lack of originality and overall design. Many critics also pointed out that Ubisoft is phoning it in and they made a point to say it's the most linear game they've ever seen in an Assassin's Creed title. Although the game has been with me for three days now, my excitement for the game is still high as I type this review. The game is still very glitchy at times, the multiplayer is fun (though I did not partake in it for most of the review), and the combat is still one of the best I've ever seen. The new system of parkour is fun, you can slide off rooftops and it's actually exciting the first few times it happens, but I can't play it

long and it will start to frustrate me. However, after taking a break from it and not touching the game for a couple days, I'm back. I will come to this review without any bias. So, here goes." More information may be revealed in the future. Don't forget to visit the official website, to check out the cinematic trailer that was released
