### What's New In?

XmlParsingUrlQuery Is there a library that provides parsing of the query string to parse the path prefix/select arguments/extra arguments from the Url, rather than having to encode them as part of the path (as f.ex. I need to get query parameters but the query string must be parsed into a nice valid URI path. I am aware that there are similar libraries to get query parameters (like URI.js) but they all seem to be a bit more complex than what I require, as they rely on having query parameters already encoded in the URI and use their own parsing logic (the hash part) and they do not provide a simple way to get the path part. What I'd need is a library (or simple implementation) that does the same as below (just a simplification): (function(window){ var path = ""; var pathMatches = window.location.pathname.match(/\/(?:\w+\/)\*\$/); console.log(pathMatches); // [ /a/foo, /foo ] })(window); And I need this to work in IE 9+. I have a library with a similar concept, but can be found on GitHub: RUTHERFORD, NJ - JANUARY 22: Sheldon Richardson #96 of the New York Jets is grabbed by teammate Eric Wood #62 as he drops down during the fourth quarter of the NFL game against the New York Giants at MetLife Stadium on January 22, 2017 in East Rutherford, New Jersey. The Jets defeated the Giants 23-20.
