

The man who made more than £90million from IT firms Clack Data and Media Experts was today convicted at Manchester Crown Court. The world's worst cyberstalker used the malicious code to Hoover emails and database records from the internet in a relentless spy attempt, before he sold them on to a dozen spy agencies. Operating from the industrial district of Salford, Jonathan Charlton, 41, looked into targeted organisations including the NHS, Parliament and the Ministry of Defence. The jury took just over seven hours to convict him of the data fraud offences and a computer misuse offence which related to the conduct of the BBC. The businessman, who was director and chief executive of Clack Data, also volunteered to parliament he was assisting the Cabinet Office and the Home Office's security service MI5 with their own investigations into cyber threats. In a statement through his solicitors today, he said: "I would like to stress that this is not a further step in my actions in the name of terrorism as I always believed that the use of the media to deliver the message is just as effective as any other delivery mechanism. "I am now looking at the legal advice on my position with the BBC and this will be the final chapter in this chapter of my life." Today he was cleared of four counts of conspiracy to defraud the Crown and one of attempting to pervert the course of justice. "Our cyber security services are constantly under attack by cyber terrorists, and many of these attacks are directed towards our businesses and institutions," said David Lidington, head of the MI5. "Clack Data was a significant victim and they have my thanks for their quick response and action. Development and characterization of type 2 diabetic rats with or without complications. This study describes the development and characterization of new genetically modified diabetic animals that display high fasting blood glucose levels, hyperglycemia, islet vacuolization, and non-alcoholic fatty liver disease (NAFLD). This is accomplished by systemic administration of the KK-A(y) strain of obese and diabetic (Kob/Kob x A(y)) rats with streptozotocin (STZ). These animals showed a high blood glucose level by 7 weeks post-administration (11.93 +/- 1.81 mmol/l) that was comparable to the other groups treated with either STZ ( c6a93da74d
